PROFESSIONAL SUMMARY

AI/ML engineer and technical lead with **3+ years shipping production AI** for Indian government bodies and SaaS. Government systems built for municipal and district offices serve **21.6K citizen conversations** and track **7,531 Cr** of land-acquisition compensation across **16,375 land records**. Two products sold in 2024 (toasty.ai, launchpage.me); now building **Payge** (payge.store), an Indian Shopify for social sellers, with Razorpay Route payouts and an AI growth engine.

TECHNICAL SKILLS

AI / ML	RAG Pipeline Design LangChain (Agents, Chains, Tools, Memory) CrewAI (Multi-Agent Orchestration, Role-based Agents, Task Delegation) Vector DBs: FAISS, Pinecone LLM Prompt Engineering Voice AI (Whisper, STT/TTS) AI Agent Orchestration
Frontend	Next.js (App Router, SSR, API Routes) React Tailwind CSS Flutter (iOS & Android)
Backend	Python (FastAPI, Flask) Firebase (Firestore, Auth, Cloud Functions) REST APIs Razorpay Route Smart Contracts
Engineering	System Design Code Review & Mentoring Agile / Sprint Delivery Cross-functional Collaboration API Documentation
Tools	Git GitHub Postman VS Code Figma (Design Handoff)

KEY ACHIEVEMENTS

- Built AI Mitra, a RAG citizen chatbot for Chh. Sambhaji Nagar Municipal Corporation & Smart City 21,596 conversations, 58,706 messages and an estimated 16,197 citizen-hours saved.
- Delivered eSulabh, a blockchain land acquisition system with an AI layer for Palghar Collector Office tracks 7,531 Cr compensation across 16,375 land records and 221 villages.
- Built Sanvichar, an AI board meeting platform for Shivshahi Punarvasan Prakalp Ltd (Govt Board) hosted 3 live board meetings with bilingual (English + Marathi) transcription and resolution tracking.
- Two self-built SaaS products acquired in 2024: toasty.ai Lumination.ai (USA) and launchpage.me Canadian entrepreneur.
- Built Payge (payge.store), an Indian Shopify for social sellers 100+ live seller stores, Razorpay Route payouts (95% to seller, 5% to Payge) and an AI growth engine.
- Worked directly with government officials, district collectors, and Smart City programme officers to gather requirements and deliver production systems.

ENGINEERING EXPERIENCE

AI/ML Engineer & Technical Lead

Arixolve Ventures Pvt Ltd Noida, India 2022 Present

Worked across engineering, architecture, and client delivery for the company's product and government project portfolio. Collaborated with a small engineering team; participated in client discovery sessions to define technical requirements and solution scope.

Project 1 AI Mitra AI Citizen Chatbot Chh. Sambhaji Nagar Municipal Corp & Smart City

Python LangChain CrewAI RAG FAISS / Pinecone FastAPI Next.js Voice AI STT / TTS

- Built a **RAG chatbot** grounded on official municipal documents (chunking, embeddings, semantic retrieval). In production it has handled **21,596 conversations and 58,706 messages**, averaging **2.7 messages per conversation**, so most citizens get an answer in about three turns.
- Saved citizens an estimated **16,197 hours (971,820 min)** and delivered **8,806 official links** straight into chats. Top intents: Development Plan (DP), property tax, occupancy and marriage certificates.
- Only **0.5% of queries (100)** were flagged as complex and needing human follow-up.
- Serves **English (92%) and Marathi (8%)**, with voice input and output (STT) for non-technical and vernacular-language users.
- Built a **CrewAI reporting crew** (data analyst, trend detection and report writer agents) that reads query logs, surfaces unresolved clusters, and sends structured summaries to municipal leadership.
- Shipped the **Next.js citizen portal** (chat UI, voice toggle, query history) with the design team.

Project 2 eSulabh Blockchain Land Acquisition System + AI Layer Palghar Collector Office

Blockchain Smart Contracts Python LangChain RAG Next.js Firebase AI Agents

- Built the AI and analytics layer of a land-acquisition system tracking **10+ infrastructure projects** (expressways, rail, freight corridor, water supply), **16,375 land records** and **221 villages**: **7,531 Cr** total compensation, of which **5,715 Cr is paid** and **1,816 Cr pending**, against **3,313 Ha** of land required (**1,437 Ha acquired** across 206 villages).
- Contributed to the **on-chain data model and smart contracts** (approval sequencing, invalid-state rejection) with a 2-person blockchain team, making ownership transfers and multi-party approvals tamper-proof.
- Built a **role-scoped RAG chatbot** over the acquisition data: access is enforced in the retrieval query, not the prompt, so each officer only retrieves their own division's records, and staff assigned to a project are split into access groups.
- Added a **public citizen lookup**: landowners see their own land and compensation status with **mobile number + Gat number**, and only after the Collector office releases the data.
- Delivered **6 one-click reports** for the Collector's office (1-page Collector Briefing, Village Bottlenecks, Financial Summary, Project Timeline, Pending Cases, Structure Report) plus drill-downs by project, taluka and village: budget vs spent, government / forest / private land split, pending-payment reasons.

Project 3 Sanvichar AI Board Meeting Platform Shivshahi Punarvasan Prakalp Ltd (Govt Board)

Python Whisper / STT LLM Next.js Firebase Bilingual NLP Marathi

- Hosted **3 live board meetings** on the platform, transcribed and structured in real time.
- Built **real-time Whisper-based transcription** with structured extraction of agenda items, decisions, action points and votes.
- Generated **bilingual (English + Marathi)** summaries and resolution text for Maharashtra government documentation.
- Built a **human-review notes editor with diff-aware versioning**, so the secretariat reviews and approves every summary before it is finalised.
- Built the **voting tracker** and a **resolution-certificate generator** that issues certificates directly from recorded votes.

Project 4 Payge Indian Shopify for Social Sellers payge.store Co-founder & CTO

Next.js Firebase Tailwind CSS Razorpay Route Instagram API LLM Agents

- Built Payge, where a seller launches their own **single-product online store** with checkout, orders and analytics in one place. **100+ live seller stores**, **2K unique visitors**, **14K page views** and **30K tracked events**.
- Implemented **Razorpay Route** with partner OAuth onboarding, so every sale splits automatically: the seller gets **95%** paid straight to their bank account and Payge keeps **5%**, with no manual payouts and no subscription fee.
- Built **Growth OS**: a seller connects their Instagram account and their competitors' accounts (Instagram API with Instagram Login), the system analyses the competitors' reels from the **past 7 days**, finds which ones are working, and the AI turns them into content ideas for the seller's own brand, a weekly growth engine.

SHIPPED PRODUCTS 2 ACQUIRED (2024)

toasty.ai Testimonial SaaS

Acquired by Lumination.ai, USA 2024

Next.js Firebase Multi-tenant SaaS Tailwind CSS

- Multi-tenant SaaS for collecting testimonials: custom embed widgets, shareable review pages and automated collection sequences. Reached paying customers before the sale; **acquired by Lumination.ai in 2024**.

launchpage.me Startup Validation Tool

Acquired by Canadian Entrepreneur 2024

Next.js Firebase No-code Landing Page Builder

- No-code waitlist builder that takes a founder from signup to a live validation page, bought for its simplicity and conversion-focused design.

visionari.me AI Feedback Intelligence

Active 2024 Present

Python CrewAI LangChain Multi-Agent Web Search Agent Next.js Firebase

- Built using a **CrewAI multi-agent system** a research agent scrapes and analyses web data, a market analyst agent scores demand signals, and a report writer agent compiles prioritised feature lists with revenue-change estimates per item.

EDUCATION

B.Tech Computer Science & Engineering AKTU 2023 70%

- Relevant coursework: Data Structures & Algorithms, Machine Learning, DBMS, Computer Networks, Operating Systems.
- Began building AI/web projects and freelance government tech work during final year transitioned directly into full-time engineering and product development post-graduation.
